

# Domestic e-loop mini

Domestic Wireless Vehicle Detection System uses magnetometer sensors to detect the presence and movement of vehicles. These detections are transmitted to a nearby transceiver for gate activation. The sensors are installed on the surface of entry or exit passages using dynabolts, contain two replaceable AA batteries, and can withstand almost any vehicle.

**Note:** Gate or door controller must have a dedicated open input and auto close function enabled.

#### **Functions / Features**

# Lower power consumption 3-axis magnetometer for vehicle detection

- 8 Hz sampling rate
- Auto-calibration
- Exit/Entry detection mode

#### Fast and simple installation

Quick non-permanent installation

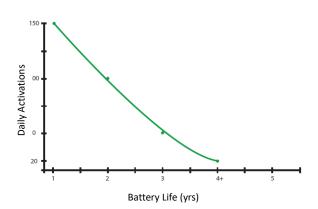

#### Up to 4 year battery life

- Compact design
- Compatible with various gates

#### Reliable radio communications with transceiver

- Reliable radio communication
- High security 128-Bit AES Encryption

#### **Battery Life**
